i had my genome analyzed by one of those companies that offer their services for a comparatively low fee. they didn't supply me with a full sequence but rather a small subset of my DNA in the form of a very long text containing only the letters A, C, G and T. those stand for the four nitrogen-containing nucleobases adenine, cytosine, guanine and thymine that are the building blocks of the two polynucleotide strands that coil around each other to form the iconic double helix of the DNA molecule.

i wrote a program that searched the genetic code for german and english words resulting in this very personal text written by evolution.
